# CHAPTER-I

## THE GENERAL INTRODUCTIONS

### A. PREFACE

Thank you for the purchasing of CAS scale.  
This scale has been designed with CAS reliability, under rigid quality control  
and with outstanding performance.  
Your departments can enjoy with this high quality reliable CAS product.  
We believe that your needs will be satisfied and you will have proper reliability  
with in variable weight.  
This manual will help you with proper operations and care of the DB series.  
Please keep it handy for the future references.

### B. THE PRECAUTIONS

1. Make sure that you plug your scale into the proper power outlet.
  2. Place the scale on a flat and stable surface.
  3. Plug into a power outlet 30 minutes before operations.
  4. Keep the scale away from strong EMF noises may cause incorrect weight readings.
  5. This scale must be installed in a dry and liquid free environment.
  6. Do not subject the scale to sudden temperature changes.
  7. Do not subject the platter to sudden shocks.
- B. If the scale is not properly level, please adjust the 4 legs at the bottom of the scale (turn legs clockwise or counterclockwise) so as to center the bubble of the leveling gauge inside the indicated circle.

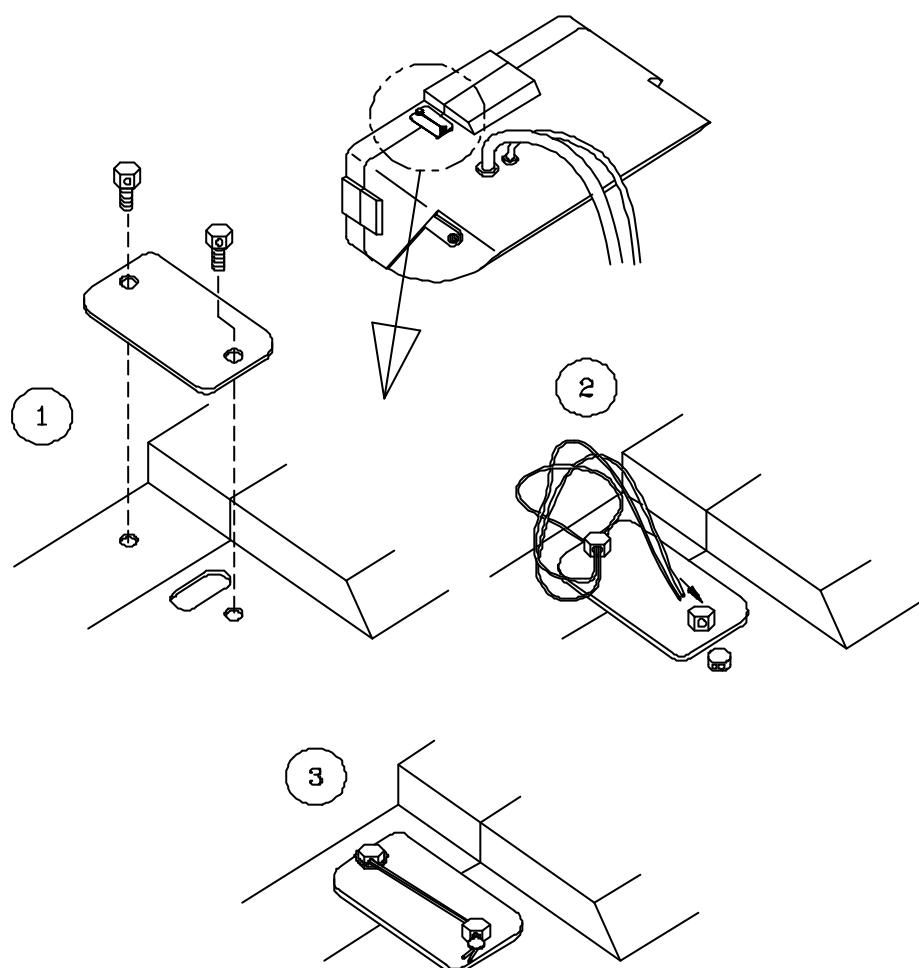

### C. THE SPECIFICATIONS

| MODEL               | DB -1H                     |              |              |              |
|---------------------|----------------------------|--------------|--------------|--------------|
| CAPACITY            | 60 x 0.01kg                | 120 x 0.02lb | 150 x 0.05kg | 300 x 0.1 lb |
| DISPLAY;<br>WEIGHT  | Vacuum Fluorescent Display |              |              |              |
| DISPLAY DESIGNATORS | ZERD and TARE              |              |              |              |
| MAXIMUM TARE        | -60.00 kg                  | -88.88lb     | -88.85kg     | - 300.0 lb   |
| POWER SOURCE        | 110V /220V<br>50, 60 Hz    |              |              |              |
| POWER CONSUMPTION   | APPROX. 10W                |              |              |              |
| PLATTER ("")        | 128.54 x 86.52             |              |              |              |
| PRODUCT SIZE ("")   | 165.1 x 106.68 x 184.15    |              |              |              |

Notice : The specifications are subject to change for improvement without notice.

## D. SEALING METHOD

REV : 00

---

## CHAPTER-II

# THE CALIBRATIONS

---

### A. SET THE CALIBRATION MODE

The CAL switch is located underneath of a hole on the bottom of the front cover of head.

1. Remove a seal plate.
2. Slide CAL switch to the CAL position.

C A L

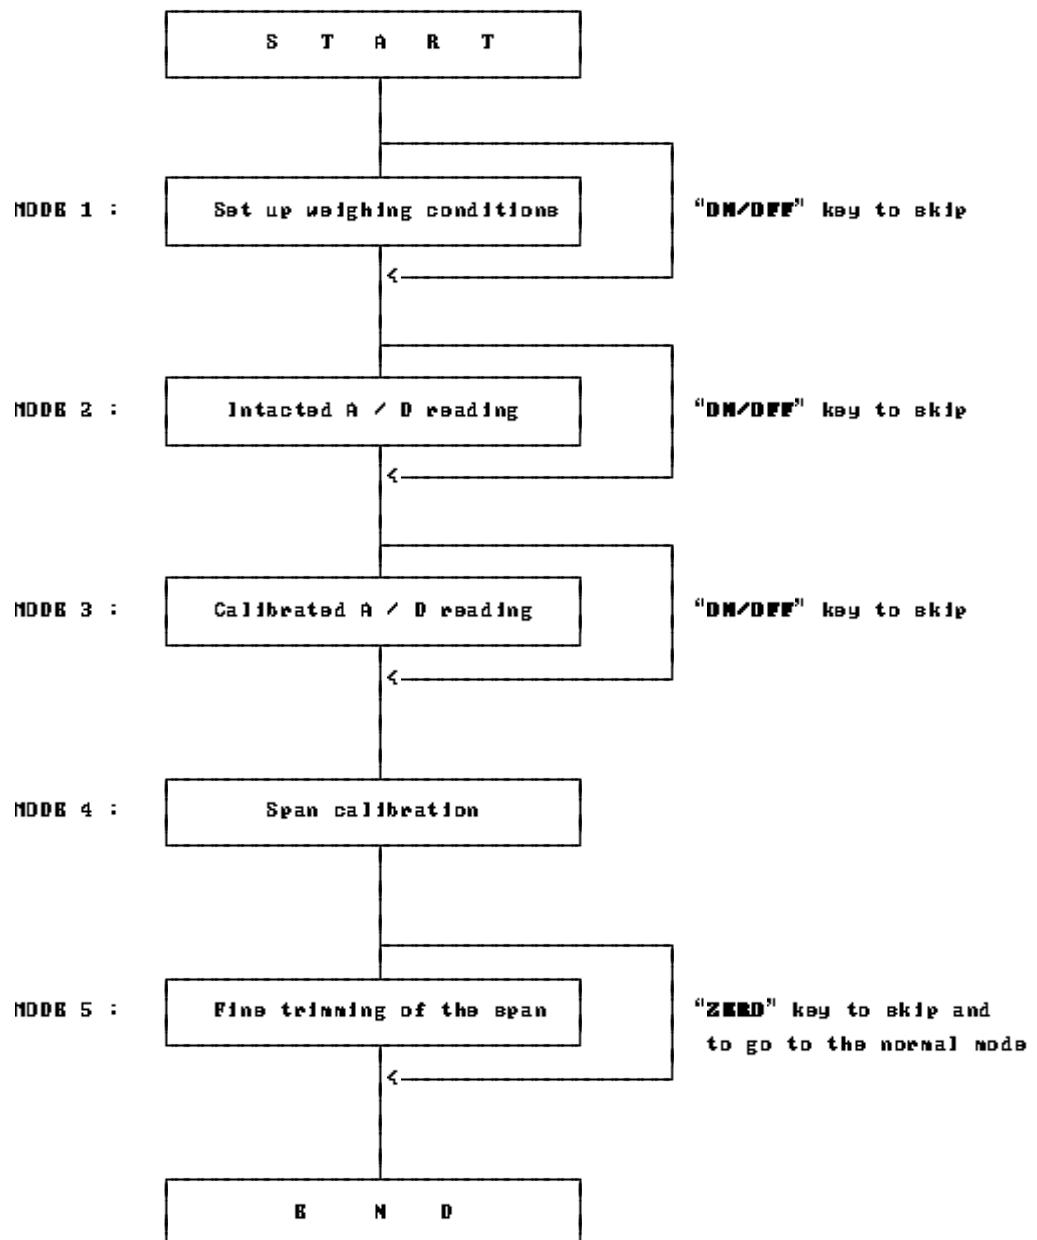

C A L

3. Plug into the AC outlet.  
-> The display shows "CAL" three times.

## B. THE MODES

This scale has 5 modes to set the weighing conditions and the span calibration.  
These 5 modes are described as below.

## B. 1 THE MODE 1

In this mode 1, a various weighing conditions can be set.  
Weighing conditions for capacity, external resolution, and decimal point etc.  
In this mode, below three keys have an alternative functions respectively.

 \* (or kg/lb) => Numeric increment

 TARE => Digit shift

 ZERD => Enter

\* For entire set of weighing conditions, please refer to the APPENDIX 1.

## B. 2 THE MODE 2

In this mode 2, intacted A/D reading is shown on the display.  
This intacted A/D reading is necessary to check an initial zero point and  
a span range , when either a load cell was replaced or an analog module  
was replaced.  
Unless above both replacements, skip to this mode 2 by pressing the "DM/DEF" key.

## B. 3 THE MODE 3

In this mode 3, a calibrated A/D reading is shown on the display.  
This mode helps to do a fine span trimming without span calibration(MODE 4).

## B. 4 THE MODE 4

In this mode 4, an actual span of the scale is calculated by digital calibration method.  
The sign "ULDAD", means empty the weighing pan, "LOAD" means, load a full weight  
on the weighing pan.

\* If you want to quit this span calibration, press the "ZERD" key while either "ULDAD" or  
"LOAD" is shown on the display.

## B. 5 THE MODE 5

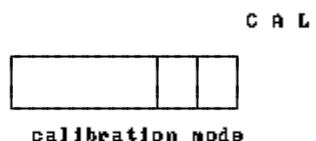

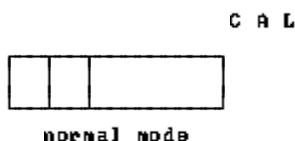

Finally in this mode 5, a fine span trimming is obtained after a span  
calibration(MODE 4)

## C. THE SPAN CALIBRATION(MODE 4)

### C. 1 SET THE CALIBRATION MODE

The CAL switch is located underneath of a hole on the bottom of the front cover of head.

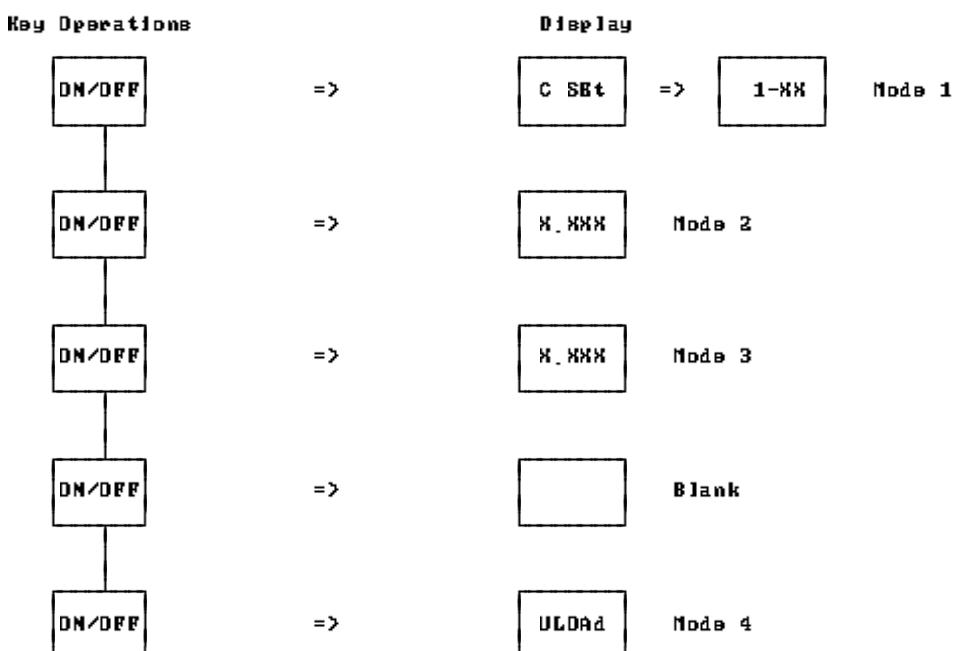

1. Remove a seal plate.
2. Slide CAL switch to the CAL position.

3. Plug into the AC outlet.  
-> The display shows "CAL" three times.

### C. 2 ENTRY OF THE MODE 4

Enter to span calibration mode as below.

## C. 3 SPAN CALIBRATION

In this MODE 4, "ULDAD" is shown on the display.

1. Press the "DM/DFF" key,
  - > The display shows a count down 9 to 0.
  - > "LDAd" is shown on the display.
2. Load a full weight on the platter gently.
3. Press the "DM/DFF" key,
  - > The display shows a count down again,
  - > The display shows "End" and be blanked.
4. Remove a full load from the platter.

\*If you want to quit this span calibration, press the "ZERD" key while either "ULDAD" or "LDAd" is shown on the display.

With above operations, the span calibration is finished, and following paragraph A.4 guides to confirm the span and to do fine trimming for more accurate weighing.

However when fine trimming is not needed, press the "ZERD" key to skip following MODE 5 and exit to the normal mode.

## C. 4 CONFIRMATION OF THE SPAN(MODE 5)

This mode 5 is only available after performance of a previous span calibration(mode 4).

1. Press the "TARE" key.
  - > The display shows the initial zero point.
2. Press the "ZERD" key to read a span(net weight),
  - > The display shows "0".
3. Load a full weight on the platter gently.  
Unless the display has 30,000 +-1, perform a fine trimming.
4. If a span value is higher than 30,000, press the "%" or "kg/lb" key twice for a decreasing and less than 30,000, press the "%" or "kg/lb" key and press the "TARE" key for an increasing.
5. At the end of fine trimming, press the "DM/DFF" key.
6. Press the "ZERD" key to exit and go to the normal mode.
7. Return the CAL switch to the normal position(initial position).

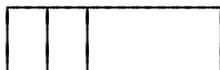

## D. THE SPAN CALIBRATION FROM REPAIR

### D. 1 SET THE CALIBRATION MODE

The CAL switch is located underneath of a hole on the bottom of the front cover of head.

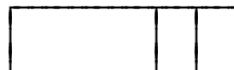

1. Remove a seal plate.
2. Slide CAL switch to the CAL position.

C A L

normal mode

C A L

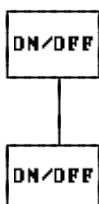

calibration mode

3. Plug into the AC outlet.  
-> The display shows "CAL" three times.

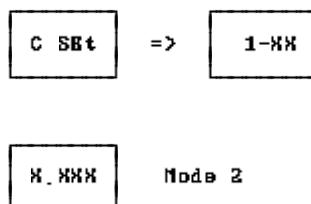

### D. 2 CHECK THE INITIAL ZERO AND SPAN(MODE 2)

#### Key Operations

=>

#### Display

1. Press the "TARE" key to check the initial zero point.  
The initial zero point must be lower than 20,000 counts.
2. Press the "ZERD" key to check the span.
3. Load a full weight on the platter gently.  
The span must be higher than 30,000 counts.
4. Remove a full load on the platter.
5. Press the "DN/DFF" key three times to go to the MODE 4.

### D. 3 THE SPAN CALIBRATION(MODE 4)

In this MODE 4, the display shows "ULDAD".

1. Press the "DN/DFF" key.  
-> The display shows a count down 8 to 0.  
-> "LDAd" is shown on the display.
2. Load a full weight on the platter gently.
3. Press the "DN/DFF" key.  
-> The display shows a count down again,  
-> The display shows "End" and be blanked.
4. Remove a full load from the platter.

\*If you want to quit this span calibration, press the "ZERD" key while either "ULDAD" or "LDAd" is shown on the display.

With above operations, the span calibration is finished, and following paragraph B.4 guides to confirm the span and to do a fine trimming.  
However when fine trimming is not needed, press the "ZERD" key to skip following MODE 5 and exit to the normal mode.

## D. 4 CONFIRMATION OF THE SPAN(MODE 5)

This mode 5 is only available after a performance of previous span calibration(mode 4).

1. Press the "TARE" key.  
-> The display shows the initial zero point.
2. Press the "ZERD" key to read a span (net weight).  
-> The display shows "0".
3. Load a full weight on the platter gently.  
Unless the display has 30,000 +-1, perform fine trimming.
4. If a span is higher than 30,000, press the "+" or "kg/lb" key twice for a decreasing and less than 30,000, press the "+" or "kg/lb" key and touch the "TARE" key for an increasing.  
Whenever you press these keys, a count can be changed.
5. At the end of fine trimming, press the "ON/OFF" key.
6. Press the "ZERD" key to exit and go to the normal mode.
7. Return the CAL switch to the normal position (initial position).

## E. THE SPAN CALIBRATION WITH A PARTIAL LOAD

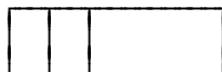

For the purpose of convenience, a partial span calibration is provided.

### E. 1 SET TO THE CALIBRATION MODE

The CAL switch is located underneath of a hole on the bottom of the front cover of head.

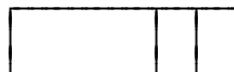

1. Remove a seal plate.
2. Slide CAL switch to the CAL position.

C A L

normal mode

C A L

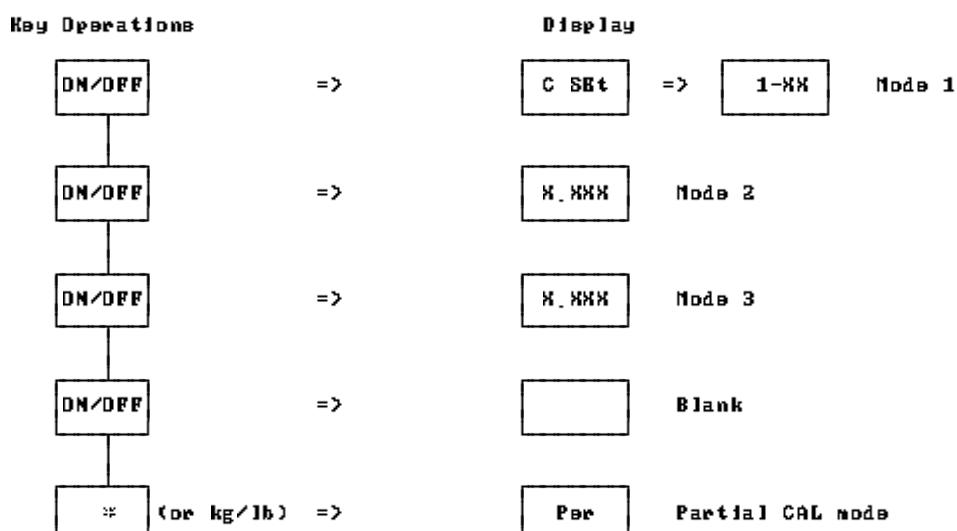

calibration mode

3. Plug into the AC outlet.  
-> The display shows "CAL" three times.

### E. 2 ENTRY OF A PARTIAL CALIBRATION

Enter to partial span calibration mode as below

### E. 3 INPUT A PARTIAL LOAD BY PERCENTAGE

In this mode, below three keys have an alternative functions respectively.

\* (or kg/lb) => Numeric increment

TARE => Digit shift

ZERD => Enter

Enter a desired partial load by percentage using above three keys.  
Press the "DN/DFF" key to move to MODE 4.

## E. 4 THE SPAN CALIBRATION

In this MODE 4, "ULDAd" is shown on the display.

1. Press the "DM/DFF" key,
  - > The display shows a count down 9 to 0.
  - > "LDAd" is shown on the display.
2. Load a full weight on the platter gently.
3. Press the "DM/DFF" key,
  - > The display shows a count down again,
  - > The display shows "End" and be blanked.
4. Remove a full load on the platter.

\*If you want to quit this span calibration, press the "ZERD" key while either "ULDAd" or "LDAd" is shown on the display.

With above operations, the span calibration is finished, and following paragraph C.5 guides to confirm the span and to do a fine trimming.

However when fine trimming is not needed, press the "ZERD" key to skip following MODE 5 and exit to normal mode.

## E. 5 CONFIRMATION OF THE SPAN(MODE 5)

This mode 5 is only available after a performance of previous span calibration(mode 4).

1. Press the "TARE" key,
  - > The display shows the initial zero point.
2. Press the "ZERD" key to read a span(net weight).
  - > The display shows "0".
3. Load a full weight on the platter gently.  
Unless the display has 30,000 +-1, perform fine trimming.
4. If a span is higher than 30,000, press the "+" or "kg/lb" key twice for a decreasing and less than 30,000, press the "+" or "kg/lb" key and touch the "TARE" key for an increasing.  
Whenever you press these keys, a count can be changed.
5. At the end of fine trimming, press the "DM/DFF" key.
6. Press the "ZERD" key to exit and enter to normal mode.
7. Return the CAL switch to the normal position(initial position).

# CHAPTER-III

## THE PART REPLACEMENTS

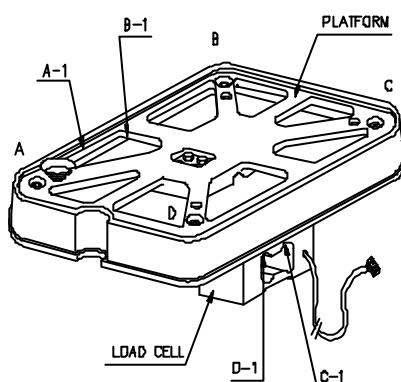

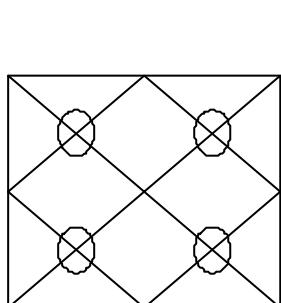

### A. REPLACEMENT OF THE LOAD CELL

#### A. 1 REPLACEMENT OF THE LOAD CELL

- A. 1.1 Remove the platter.
- A. 1.2 Remove the platform on the load cell with a hex wrench.
- A. 1.3 Disconnect a load cell connector wires.
- A. 1.4 Remove the load cell from the body.
- A. 1.5 Replace the load cell by a new one.
- A. 1.6 Connect a load cell connector wires.
- A. 1.7 Place the platform on the load cell.
- A. 1.8 Place the platter on the platform.

#### A. 2 CORRECTION OF THE ECCENTRICITY

- A. 2.1 Set the calibration mode.
- A. 2.2 Set the MODE 2. (CHAPTER II, D.2)
- A. 2.3 Rezero the display by pressing the "ZERO" key, if it is needed.
- A. 2.4 Place 1/3 the scale capacity on the platform by turns as shown in belows.

- A. 2.5 File each corner which has a less output than the others.  
And check each point is within  $\pm 1$  count tolerance with  $\frac{1}{4}$  of a full load.

#### A. 3 THE SPAN CALIBRATION

Refer to the SPAN CALIBRATION FROM REPAIR in the Chapter II.

## **B. REPLACEMENT OF THE ANALOG MODULE**

### **B. 1 REPLACEMENT OF THE ANALOG MODULE**

- B.1.1 Disassemble a head.**
- B.1.2 Take out a main circuit board in head.**
- B.1.3 Desolder an analog module pins(11 points) on the main board.**
- B.1.4 Replace an analog module by a new one.**
- B.1.5 Install a main board to head.**
- B.1.6 Assemble a head.**

### **B. 2 THE SPAN CALIBRATION FOR THE ANALOG MODULE**

**Refer to the SPAN CALIBRATION FROM REPAIR in the CHAPTER-II.**

## **C. REPLACEMENT OF THE DIGITAL MODULE**

### **C. 1 REPLACEMENT OF THE DIGITAL MODULE**

- C.1.1 Disassemble a head.**
- C.1.2 Take out a main circuit board in head.**
- C.1.3 Desolder a digital module pins(48 points) on the main board.**
- C.1.4 Replace a digital module by a new one.**
- C.1.5 Install a main board to head.**
- C.1.6 Assemble a head.**

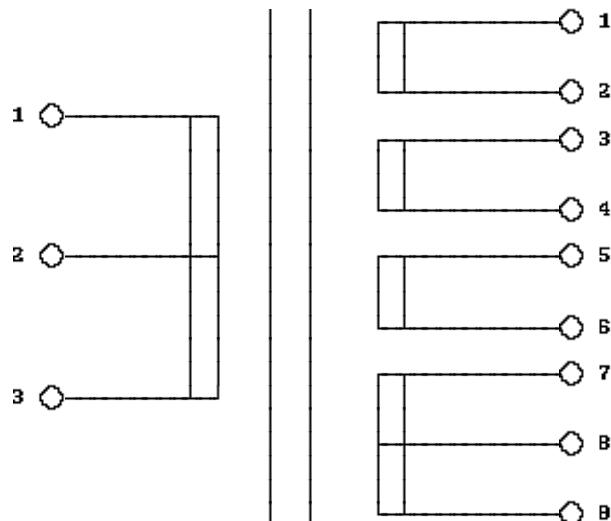

### **C. 2 THE INPUT FOR THE DIGITAL MODULE**

**In the digital module, it has a nonvolatile memory and contains a factor for a digital span calculations and the weighing conditions.**  
**Therefore all those input procedures must be performed.**  
**Refer to APPENDIX-1.**

# CHAPTER-IV

## THE TRANSFORMER

### A. THE TRANSFORMER

| QUALITY OF LEAD WIRE AND LENGTH |     |        |             |                |     |      |
|---------------------------------|-----|--------|-------------|----------------|-----|------|
|                                 | NO. | COLOR  | WIRE LENGTH | TREATMENT (mm) | nA  | V    |
| INPUT                           | 1   | WHITE  | 200 mm      | ± 10           |     | 0    |
|                                 | 2   | BROWN  | "           | "              |     | 110  |
|                                 | 3   | RED    | "           | "              |     | 220  |
| OUTPUT                          | 1   | GRAY   | 250 mm      | "              | 100 | 16.5 |
|                                 | 2   | PURPLE | "           | "              |     |      |
|                                 | 3   | BLUE   | "           | "              |     | 8.8  |
|                                 | 4   | GREEN  | "           | "              | 50  |      |
|                                 | 5   | YELLOW | "           | "              |     |      |
|                                 | 6   | ORANGE | "           | "              |     | 28   |
|                                 | 7   | RED    | "           | "              | 700 | 1.65 |
|                                 | 8   | BROWN  | "           | "              | 0   | 0    |
|                                 | 9   | BLACK  | "           | "              | 700 | 1.65 |

# CHAPTER-VI

## THE ERROR MESSAGES

### A. THE ERROR MESSAGES

These error messages will guide you to do a quick troubleshooting.

#### A. 1 "Err 1"

The "Err 1" can be happen when a current zero point has shifted from the last span calibration.

A.1.1 If a dead load of load cell has changed.

To use a different dead load from the last span calibration,  
the span calibration must be done before use.

However, a dead load should be lower than 20,000 counts in  
calibration mode 5.

A.1.2 If the contact resistance of a load cell connector is poor,  
clean the load cell connector or replace it.

A.1.3 If the zero point of a load cell has shifted.  
Replace the load cell.

A.1.4 If the analog module has failed, replace the analog module.  
For ordering, call for the name CAM 01.

#### A. 2 "Err 2"

A.2.1 The "Err 2" is not a real error, only it prompts return CAL switch to the  
normal position.

#### A. 3 "Err 10"

A.3.1 The "Err10" means a failure of the analog module.

Replace the analog module with a new one.

For ordering, call for the name CAM 01.

#### A. 4 "Err 11"

A.4.1 The "Err11" means a writing error of the internal nonvolatile memory.

To recognize this error, be sure to voltages on the circuits and do a calibration  
procedures.

Nevertheless, the display shows same "Err11", replace the digital module.  
For ordering, call for the name CDM 01.

#### A. 5 "Err 12"

A.5.1 The "Err12" warns that the scale has lost of the parameters for under  
weighing regulations or has lost of the factors for a digital span calculation.  
To recover this, enter each condition codes again.  
Refer to APPENDIX-1.

#### A. 6 "Err 13"

A.6.1 The "Err 13" means the soft key code is broken.

To recover this error, find which key is lost the soft key code  
and then enter this code again.  
Refer to APPENDIX-1.

# CHAPTER-VII

## THE OTHERS

### A. FOR THE SERIAL INTERFACES

#### THE PROTOCOLS FOR THE CAS STANDARD SERIAL INTERFACE

THIS IS HALF-DUPLEX COMMUNICATION RS-232C.

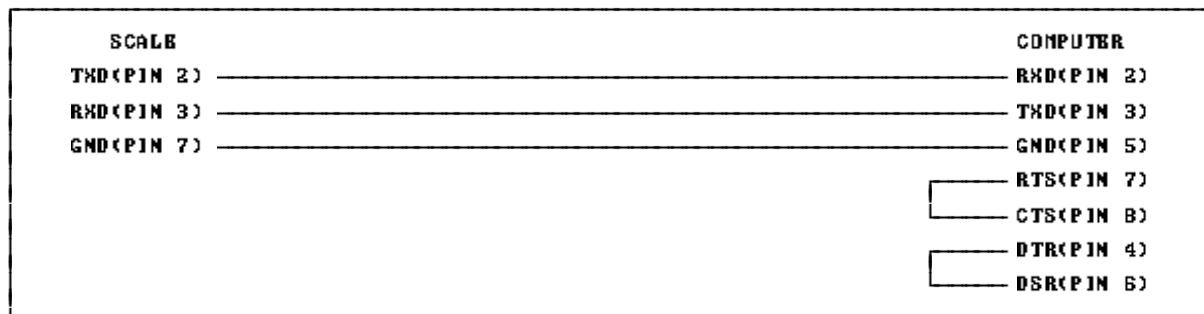

#### A. 1 THE COMMUNICATION AGREEMENTS

1. BAUD RATE -> 8,600 BPS
2. DATA BIT -> 8 BIT
3. STOP BIT -> 1 BIT
4. PARITY BIT -> NO
5. COMMUNICATION LEVEL -> RS-232C LEVEL
6. DATA FORMAT -> ASCII
7. THE COMMAND DEFINITIONS

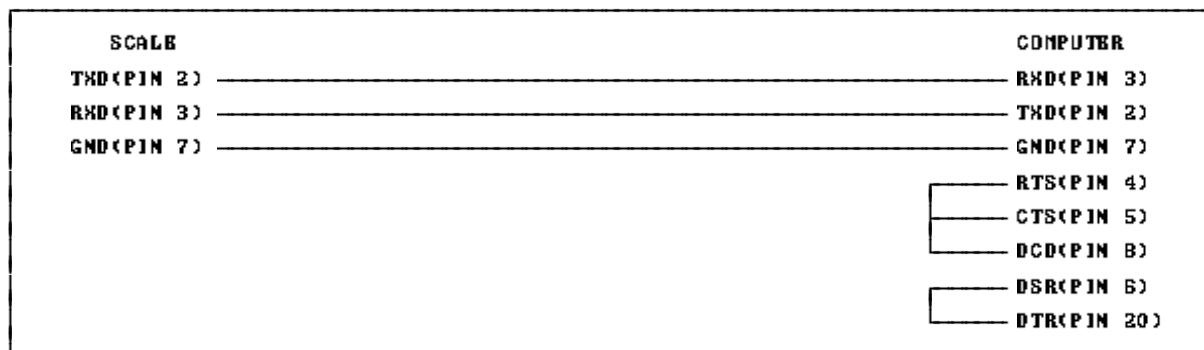

|                   |                    |
|-------------------|--------------------|
| 7-1. "ENQ" -> 05H | 7-7. "EDT" -> 04H  |
| 7-2. "ACK" -> 06H | 7-8. "DC1" -> 11H  |
| 7-3. "NAK" -> 15H | 7-9. "DC2" -> 12H  |
| 7-4. "SDH" -> 01H | 7-10. "DC3" -> 13H |
| 7-5. "STX" -> 02H | 7-11. "DC4" -> 14H |
| 7-6. "ETX" -> 03H |                    |

#### A. 2 THE WIRE CONNECTIONS

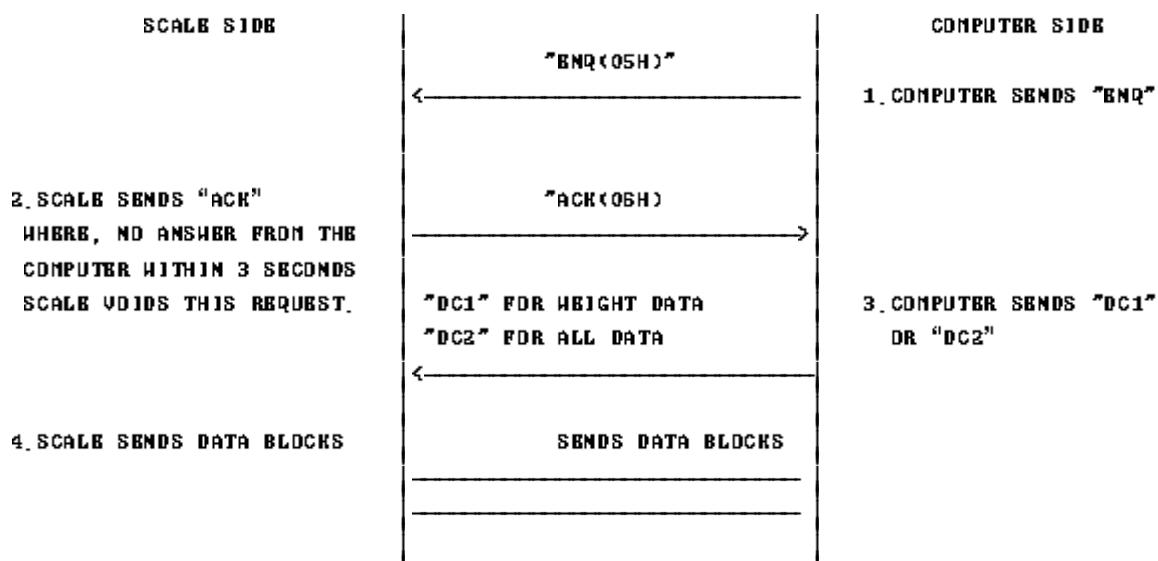

##### A.2.1 THE WIRE CONNECTIONS OF THE D-SUB 9 PIN CONNECTOR OF A COMPUTER SIDE

## A.2.2 THE WIRE CONNECTIONS OF THE D-SUB 25 PIN CONNECTOR OF A COMPUTER SIDE

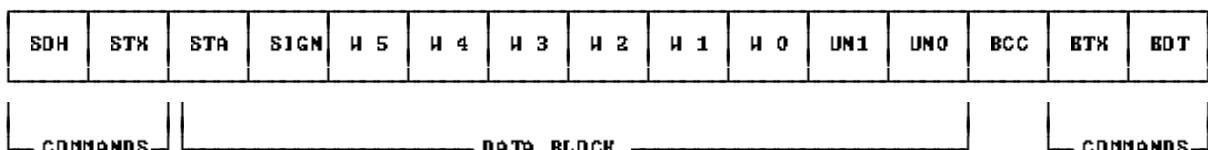

## A.3 THE PROTOCOL

## A.4. THE DATA TRAINS

### 1. THE DATA TRAINS FOR THE "DC1"

REMARKS :

- . STA -> A WEIGHING STATUS OF THE SCALE  
SCALE IS STABLE -> "S" , UNSTABLE -> "U"
- . SIGN -> SIGN OF THE WEIGHT DATA  
ZERO AND POSITIVE WEIGHT -> " " , NEGATIVE WEIGHT -> "-" ,  
OVER LOAD -> "F"
- . H5 THROUGH H0 -> WEIGHT DATA  
BUT ALL "F"s WHEN THE SCALE IS PUT ON OVER LOAD.
- . UN1 THROUGH UN0 -> UNIT OF WEIGHT(kg OR lb)
- . BCC -> BLOCK CHECK CHARACTER  
BCC IS CREATED BY EXCLUSIVE-OR OF A DATA BLOCK.

2. THE DATA TRAEMS FOR THE "DC2"

|     |     |     |     |     |     |     |     |     |     |     |     |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| SDH | STX | P 7 | P 6 | P 5 | P 4 | P 3 | P 2 | P 1 | P 0 | BCC | ETX |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|

|     |     |      |     |     |     |     |     |     |     |     |     |     |
|-----|-----|------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| STX | STA | SIGN | W 5 | W 4 | W 3 | W 2 | W 1 | W 0 | UN1 | UN0 | BCC | ETX |
|-----|-----|------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|

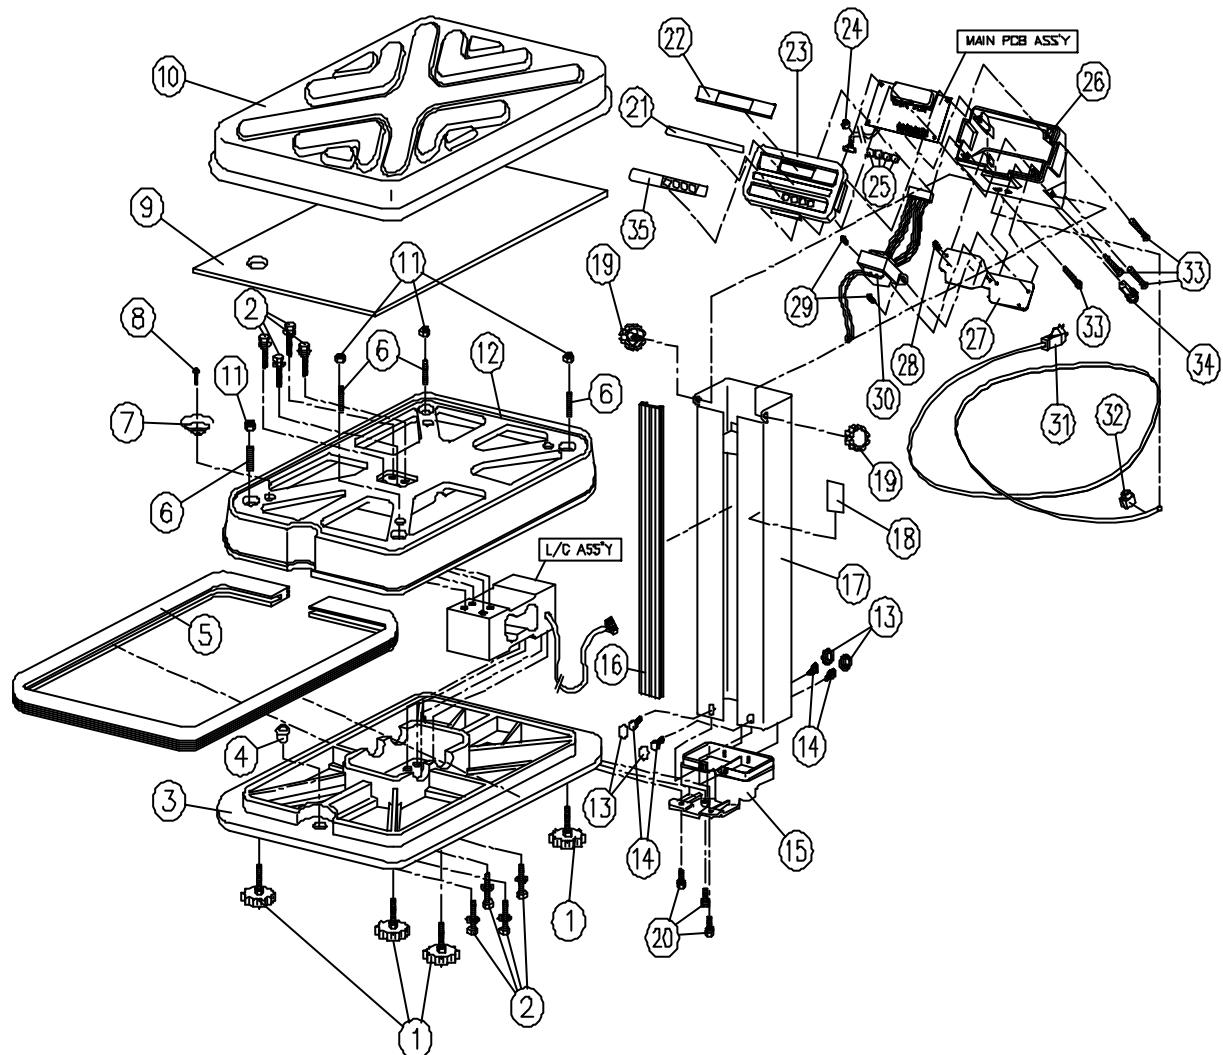

|     |     |     |     |     |     |     |     |     |     |     |     |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| STX | P 7 | P 6 | P 5 | P 4 | P 3 | P 2 | P 1 | P 0 | BCC | ETX | BDT |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|

REMARKS :

- . STA -> A WEIGHING STATUS OF THE SCALE  
SCALE IS STABLE -> "S" , UNSTABLE -> "U"
- . SIGN ->SIGNS OF THE WEIGHT DATA  
ZERO AND POSITIVE WEIGHT -> " " , NEGATIVE WEIGHT -> "-" ,  
OVER LOAD -> "F"
- . P7 THRUHOU PO -> PRICE DATA  
IF THE OVER FLOW IS HAPPEN IN PRICE, ALL "F"s WILL FILL TO DATA BLOCK  
OF THE PRICE.
- . W5 THRUHOU W0 -> WEIGHT DATA  
BUT ALL "F"s WHEN THE SCALE IS PUT ON OVER LOAD.
- . UN1 THRUHOU UN0 -> UNIT OF WEIGHT(kg OR lb)
- . BCC -> BLOCK CHECK CHARACTER  
BCC IS CREATED BY EXCLUSIVE-OR OF EACH DATA BLOCKS.

# CHAPTER-VIII

## APPENDIX-I

### A. INPUT CODES FOR THE DIGITAL MODULE

#### A. 1 THE ALTERNATIVE KEY FUNCTIONS

A.1.1 In this mode, the function of three keys are converted as below Fig. 1.

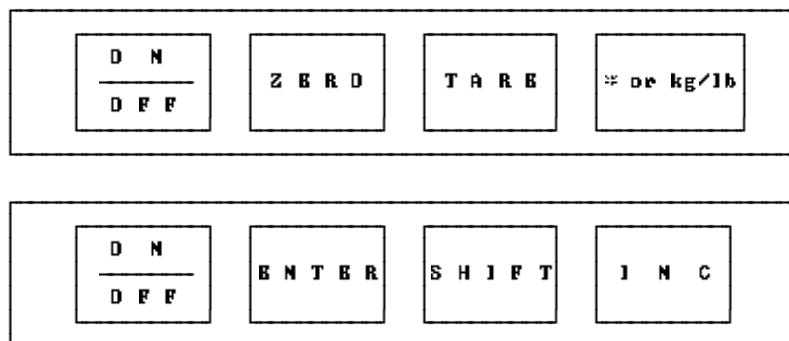

Fig. 1

- A.1.2 "INC" → This key does increase the number by one at current number.  
And also any numeral can be increased from "0" to "F"(hexadecimal)  
A.1.3 "SHIFT" → This key shifts to the next numeric digit.  
A.1.4 "ENTER" → This key saves the current code or revised code.

#### A. 2 INPUT FOR WEIGHING CONDITION CODES

- A.2.1 Set the scale to the calibration mode.  
A.2.2 Press the " DM/DEF " key (MDR 1).  
→ The display shows " C-Set " and then " 1-XX ".  
A.2.3 Enter each weighing condition code. Refer to Table 1 through Table 4 under 1 / 3,000 of external resolution.

THE CODES FOR STANDARD VERSION
